

REQUIREMENT DOCUMENT

Aiaura Fleets

Marketing Landing Page (Mobile-First)

Single Page Marketing Site for US Car Rental Operators

Submitted by: CEO

Date: _____

Document Version: 1.0

How to Read This Document

This document follows the CEO Instructions template (12 sections). It defines a single feature: the Aiaura Fleets marketing landing page.

The landing page contains 9 visual sections, all defined inside Section 8 (Design Reference). Each section has its own screenshot, copy, layout, and animation specs.

Reading Order

- Sections 1–7: project framing (problem, goal, users, what to build, what NOT to build).
- Section 8: the core build — every visual section described in detail. This is where most pages live.
- Section 9: business rules (brand, color, typography, animation, accessibility).
- Section 10: acceptance criteria — how the developer knows it is done.
- Sections 11–12: deadlines, dependencies, open questions.
- Appendices: master content library, animation reference, integration logos, FAQ schema.

IMPORTANT

Do not skip sections. Do not guess. If something is unclear, write it in Section 12 (Open Questions) and ask the CEO before building.

Section 1 — Feature Name & Priority

Feature Name	Aiaura Fleets — Marketing Landing Page (Mobile-First)
Date	_____
Priority	HIGH — Needed within current sprint (2 weeks)
Submitted By	CEO
Document Version	1.0

Priority Justification

Aiaura is launching to the US car rental market. The current landing page build does not meet the visual quality standard required for luxury operators (target buyer: 5–50 car operators in Miami, LA, Las Vegas, Atlanta and 14 more US cities). Without a credible landing page, every cold outreach email and ad campaign converts at a lower rate. This is the highest-leverage marketing asset.

Section 2 — The Problem

What is happening right now that is wrong

The current landing page build (omnisolutions.vercel.app) does not match the visual quality required to win luxury car rental operators. Specific issues:

- Generic SaaS aesthetic — looks like a free Webflow template, not a premium product.
- Off-brand colors (red, pink, yellow, purple) appear in places that break the locked mint + lime palette.
- Static elements where animation is required (live activity feed, cycling pills, channel cards).
- Generic stock icons (Feather icons) instead of branded mint+lime gradient iconography.
- Headline copy is generic ("AI employees specifically built for car rental USA operators") — fails to differentiate.
- Marquee trust badges scrolling left-to-right — reads as cheap discount-store SaaS.
- Wrong primary CTA ("Book a Free Call" instead of low-friction audit).

Who is affected

- The target buyer: US car rental operators (5–50 vehicles) in Miami, LA, Las Vegas, Orlando, Scottsdale, Atlanta, NYC, Houston, Dallas, and 14 more US markets.
- The sales team — every cold outreach link goes to a page that loses credibility in the first 3 seconds.
- The brand — first impressions are made on this page; weak first impressions cap conversion forever.

What is the cost

- Lower conversion on cold outreach (estimated 60–80% drop-off at first scroll vs. industry-grade landing).
- Lost CAC efficiency on any paid acquisition (Instagram, Google ads, partnership traffic).
- Damage to brand perception with luxury operators who expect Apple-grade polish.
- Slower close cycle — operators who land on a generic page are more skeptical on the demo call.

Section 3 — The Goal

GOAL

A US car rental operator (5–50 cars) lands on aiaurafleets.com on iPhone, scrolls through 9 sections of premium animated content in under 90 seconds, understands what Aiaura does, sees themselves in the pain points, and clicks one of two CTAs (Get Audit OR Book Strategy Call) before scrolling away.

Specific Outcomes

- Page loads in under 2 seconds on mobile 4G.
- Visual quality matches Apple iOS 26 / Linear / Vercel marketing standard.
- All 9 sections render correctly on iPhone (375px), tablet (768px), and desktop (1280px+).
- Cycling animations (hero pill, channel cards, leak calculator, typewriter questions, integration orbits) all run at 60fps.
- CTAs clearly visible above-the-fold and at every section boundary.

Section 4 — Who Is This For

Primary visitor: US car rental operators with 5–50 vehicles.

Visitor Profile

Industry	Car rental — luxury, exotic, premium daily rental
Fleet size	5–50 vehicles
Annual revenue	\$500K – \$5M
Geography	US-based. Priority cities: Miami, Los Angeles, Las Vegas, Orlando, Scottsdale, Atlanta, NYC, Houston, Dallas, plus 14 more.
Device usage	70% mobile (iPhone Safari dominant), 30% desktop
Reading context	On the go — Instagram scroll, between customer interactions, late-night browsing
Skepticism level	High — has been pitched 30+ AI tools in the last year. Burned by Air.ai (FTC shutdown March 2026).
Buying authority	Owner-operator OR ops manager with budget approval
Image consciousness	Very high — runs a luxury brand; expects vendor sites to match their aesthetic
Top language	English; secondary Spanish (Miami/LA/Houston) and Portuguese (Miami)

Page Audience Selectors (CEO Template)

- ☒ All public visitors (anonymous, not logged in)
- ☐ Admin
- ☐ Free plan
- ☐ Paid plan
- ☐ Other

Section 5 — User Stories

Five user stories drive this page. Every section maps back to at least one.

Story 1 — Pain Recognition

As a US luxury rental operator scrolling on Instagram at 11 PM, I want to land on the page and immediately see a scenario I recognize (missed midnight calls, ignored Instagram DMs), so that I feel the page understands my actual life and I keep scrolling.

Story 2 — Proof of Capability

As an operator considering AI tools, I want to see Aiaura demonstrably working in real-time across multiple channels (Instagram DM, SMS, WhatsApp, phone call, email), so that I trust this is a real product and not a sales pitch.

Story 3 — Quantified Pain

As an operator who suspects I am leaking money, I want to see a live calculator that adds up specific monthly losses (missed calls, dead CRM, slow quotes) into a believable total, so that I feel urgency to act.

Story 4 — Risk Reduction

As a skeptical buyer, I want to see clear answers to "how long does setup take", "do I need to replace my existing tools", and "what if it does not work", so that I am willing to book a call.

Story 5 — Low-Friction Next Step

As a curious-but-not-ready visitor, I want a low-commitment first action (a free 5-minute audit) instead of being forced into a sales call, so that I can investigate Aiaura on my own terms.

Section 6 — Feature List

The landing page contains 9 visual sections, in this exact order. Section 8 (Design Reference) describes each in detail.

Feature	Description	Status
Section 1: Hero	Top of page. Logo, nav, headline, sub-headline, cycling channel cards (5 channels), 2 CTAs, trust line.	Must Have
Section 2A: Real Results	Carousel of result cards with city + dollar amount.	Must Have
Section 2B: The Leak	Animated dual-card leak calculator (financial + reputation damage).	Must Have
Section 3: Meet the Team	12 AI products organized into 3 departments with cycling capability lines.	Must Have
Section 4A: Why Aiaura Wins	Differentiation section — 15+ hero stat + 3 numbered reason cards.	Must Have
Section 5: How You Go Live	Vertical 14-day roadmap with 4 milestone cards.	Must Have
Section 6A: Integrations	Animated orbital diagram — channels and operator tools rotating around Aiaura logo.	Must Have
Section 7: Questions You Can Not Answer	Typewriter-animated question stack with checkmarks for answered questions.	Must Have
Section 8: Track Everywhere	Phone foreground + laptop backdrop showing the same dashboard with hybrid stats and activity feed.	Must Have
Footer (FAQ + Closer)	FAQ accordion + final CTA + footer links.	Must Have
Smooth scroll animations between sections	Scroll-triggered fade-in and parallax for premium feel.	Must Have
Mobile-first responsive layout	Renders perfectly at 375px, 768px, 1280px+.	Must Have
Reduced-motion support	Respects prefers-reduced-motion media query.	Must Have
SEO + AI Search optimization	Meta tags, Open Graph, FAQ schema for ChatGPT/Perplexity visibility.	Must Have
Analytics integration	Google Analytics 4 + simple event tracking for CTA clicks.	Must Have
Sound effects on hover/scroll	Subtle audio feedback.	Out of Scope
Live data from Aiaura production database	Hero activity feed shows real conversations.	Out of Scope

Feature	Description	Status
User authentication / login	Any logged-in feature.	Out of Scope
Pricing page with prices visible	Public pricing.	Out of Scope
Multi-language version of the landing page	Spanish / Portuguese version.	Nice to Have
Dark mode toggle	User-controlled dark theme.	Nice to Have
Live chat widget on landing page	Real-time chat during browsing.	Nice to Have

Section 7 — What NOT To Build

CRITICAL

These items are explicitly excluded. If the developer is uncertain whether to build something, default to NOT building it and ask in Section 12 (Open Questions).

Do NOT build:

- Any logged-in user functionality (no signup, no login, no dashboards behind authentication).
- A backend API that connects to real Aiaura production data. The landing page uses static + simulated content only.
- Pricing tables with prices visible. Pricing is intentionally not public yet.
- A live chat widget on the landing page (no Intercom, no Drift, no Tidio).
- Email signup forms beyond the audit CTA. No newsletter forms, no popup forms, no exit-intent forms.
- Cookie banners with detailed preferences. Use a single accept button if legally required.
- A blog, resources section, or any content beyond the 9 specified sections.
- Customer logo carousels showing brands using Aiaura (we do not have these yet).
- Testimonial carousels with photos of real people (we do not have permission yet).
- Video backgrounds or hero videos. All hero animation must be CSS/JS, not video.
- Sound effects on scroll, hover, or CTA click.
- Dark mode toggle. The site is light-mode only for v1.
- Multi-language switcher. v1 is English-only.
- A public roadmap or "what we are building next" section.
- Social media share buttons on the landing page.
- Affiliate program signup form.
- Real customer dashboards or admin panels.
- Any payment processing or Stripe integration.

NEW SCOPE = NEW DOCUMENT

If the CEO wants any of the above added later, a new Requirement Document must be submitted. Do not add scope mid-development.

Section 8 — Design Reference

This is the largest section. It contains the locked design for every visual section of the landing page.

Mockup attached	Yes — embedded for each section below.
Total sections	9 visual sections + footer
Reference style	Apple iOS 26 glassmorphic depth + clean editorial / hand-sketched warmth
Similar product reference	Linear (linear.app), Vercel (vercel.com), Cursor (cursor.sh) — premium SaaS marketing pages
NOT like	GoHighLevel, ClickFunnels, generic Webflow templates

Section Order (Top to Bottom)

- Hero (Section 1)
- Real Results carousel (Section 2A)
- The Leak — animated leak calculator (Section 2B)
- Meet the Team — 12 AI products (Section 3)
- Why Aiaura Wins — differentiation (Section 4A)
- How You Go Live — 14-day roadmap (Section 5)
- Integrations — orbital animation (Section 6A)
- Questions You Can Not Answer — typewriter (Section 7)
- Track Everywhere — phone + laptop (Section 8)
- Footer — FAQ + Final CTA

8.0 — Global Elements (Persistent Across All Sections)

Top Navigation Bar

Sticky on scroll. Same on every section.

Layout (left to right):

- Aiaura petal logo mark (40px height, multi-petal mint+lime translucent glass — see brand assets)
- Wordmark "Aiaura Fleets" — sans-serif weight 700. "Aiaura" in deep ink (#0A2620). "Fleets" in mint (#10B981).
- Right side: "Get audit →" pill button (mint→lime diagonal gradient, white text weight 600, soft mint glow underneath, ~40px tall)
- Far right: small glass circular menu button (3 horizontal lines icon in deep ink, white 70% opacity background, 1px subtle mint border, 40px circle)

Behavior:

- Sticky to top on scroll (always visible)
- On scroll past 100px, add a subtle backdrop blur to the nav container (white 80% opacity + 16px backdrop-filter blur)
- Menu button opens a slide-down panel with nav links: Product, How it works, Integrations, FAQ, Sign in
- "Get audit →" CTA is always tap-target 44x44px minimum

8.1 — Hero Section (Section 1 on the page)

Locked Design Reference

Purpose

First impression. Must do 4 jobs in 8 seconds: (1) prove the product is alive and working right now, (2) hit a recognizable pain scenario, (3) show product breadth across channels, (4) offer a low-friction next step.

Layout (Top to Bottom)

1. Top nav (see Section 8.0)

2. Live cycling pill (centered below nav)

- Glassmorphic capsule, white 80% opacity, 28px backdrop blur, 1px subtle white inner border, soft mint glow underneath, ~40px tall
- Inside: triple-ring pulsing mint dot on the left + cycling text in 13px medium sans-serif ink color
- Text rotates every 4 seconds with letter-fade transition (see Animation spec)
- 30+ pill messages — see Appendix A

3. Headline (left-aligned, large)

- Confident sans-serif weight 700, ~42px on mobile, deep ink color
- Locked headline content: "Your phone rings at 2:14 AM. Aiaura picks up. You sleep."
- "2:14 AM" rendered in solid mint #10B981 weight 800
- "You sleep." in italic with mint→lime diagonal gradient text fill, weight 700

4. Sub-headline

- 15px medium ink #2D4F47, weight 400, line-height 1.55, max-width 360px
- Locked content: "AI staff for US rental shops with 5–50 cars — built to never miss a booking."

5. Cycling Channel Card (the centerpiece)

- Glassmorphic container card, white 78% opacity, 28px backdrop blur, 1px subtle white inner border, soft layered mint shadow, ~420px tall, full width minus margins, 24px rounded corners
- Top header strip: small mint→lime gradient at 10% opacity background, inside: pulsing mint dot + channel label (e.g., "AI OMNICHANNEL · MIAMI") in 11px tabular small-caps mint weight 700, far right "LIVE" pill
- Below the strip: a near-pixel-accurate native channel UI (iMessage, Instagram DM, WhatsApp, iPhone Call screen, or Gmail)
- Conversation bubbles flow top to bottom, with typewriter animation on Aiaura responses
- Bottom of card: small caption like "\$14,400 booked while operator was at dinner" with the dollar amount in mint→lime gradient
- 5 dots indicator at the very bottom showing position (1 of 5 channels cycling)
- Card cycles through 5 channels every 7–8 seconds. See Animation spec.

6. Two CTAs (full-width pills, stacked on mobile)

- Primary: "See what you're losing →" — mint→lime diagonal gradient pill, white text weight 600, ~56px tall, soft mint glow underneath, inner top-edge highlight. Links to /audit or /mirror page.
- Secondary: "Watch 90-sec demo" — glass pill (white 70% opacity, 1px mint border), ink text, play triangle icon in small mint circle. Opens a modal video.

7. Trust line

- Centered, 13px ink-mute, italic on city names
- Locked content: "Trusted by rental shops in Miami, LA, Las Vegas, Scottsdale, and 14 more US cities."

Animation Specs

- Cycling pill: 4 seconds per message, 400ms cross-fade transition
- Channel card cycle: ~7 seconds per channel (typewriter conversation runs 5–6s, then 1s hold, then card fades out and next fades in over 0.6s)
- Inside each channel card: customer message slides in from left (300ms), 1.5s pause, AI response types out letter-by-letter at ~30ms per character, lightning bolt "AIAURA · 4s" pill appears (300ms fade), customer follow-up, AI response, final caption fade-in
- All animations 60fps, ease-out cubic for natural feel
- On reduced-motion: disable typewriter and cycling, show static frame with manual prev/next dots

Mobile Responsive

- Headline scales from 42px → 32px on screens under 380px
- CTAs stack vertically on mobile, side-by-side on tablet+
- Channel card maintains aspect ratio, scales width to viewport with 16px side margins

8.2 — Real Results Carousel (Section 2A on the page)

NO LOCKED SCREENSHOT

This section was discussed but the image-generation step was skipped per CEO instruction. Build per spec below. The CEO will review the first build and provide visual feedback.

Purpose

Prove the product works in production. Carousel cycles through specific real-world results, each tied to one of the 12 AI products + a city + a dollar amount. Builds confidence that Aiaura already runs across the US.

Layout (Top to Bottom)

1. Section pill (centered)

- Glassmorphic capsule, "REAL RESULTS · LAST 30 DAYS" in 11px tabular small-caps mint weight 700 with pulsing mint dot

2. Section heading (left-aligned)

- "Real results. Real operators. Last 30 days." — sans-serif weight 700, ~32px deep ink
- "Last 30 days." rendered in italic with mint→lime gradient text fill, weight 800
- Hand-sketched mint underline beneath the gradient phrase

3. Sub-line

- "Specific bookings recovered, calls captured, and reviews collected by Aiaura — for US rental shops between 5 and 50 cars."

4. Horizontal Carousel (centerpiece)

- Glassmorphic active card (~85% screen width, ~280px tall)
- Previous card peeks 15% from left, next card peeks 15% from right (both slightly faded ~80% opacity, 2px blur)
- Active card content: 40px mint→lime gradient icon top-left, product name in tabular small-caps mint, big number "\$14,400" in mint→lime gradient tabular monospace ~52px, action line "Booked from a 2:14 AM call", hairline mint divider, attribution "Carlos M., MVP Miami · April 18", context tag pill at bottom
- Dots indicator below carousel: 12 dots showing position
- "1 / 12 · AUTO-PLAYING" small-caps tabular monospace mint label

5. Anchor stat strip below carousel

- 3-column glass cells: "\$2.4M Recovered · 30 days" / "47 US cities live" / "312 conversations live now" (with pulsing mint dot)

Carousel Content

Full list of 25 result cards — see Appendix A, Section A.3.

Animation Specs

- Card auto-advances every 4 seconds with smooth slide-left transition (600ms ease-out)
- Pause on hover/touch
- Manual swipe gesture on mobile
- Active card has subtle scan-line sweep animation across it on 3.5s loop
- Anchor stat strip numbers count up from 0 when scrolled into view (1.8s, ease-out cubic)

8.3 — The Leak Section (Section 2B on the page)

Locked Design Reference

Purpose

Create urgency by quantifying invisible monthly losses. Two stacked animated cards: financial leaks (with dollar amounts and ticking total) and reputation damage (qualitative, with damage meters). The buyer watches their losses add up in real-time.

Layout (Top to Bottom)

1. Section pill

- "THE LEAK" in glassmorphic mint capsule with pulsing dot

2. Section heading (centered)

- "Every month, -\$77,000 walks out the back door."
- "-\$77,000" in mint→lime gradient tabular monospace, weight 800, ~42px (dominant)

3. Sub-line

- "Watch the leaks add up. Then watch what gets damaged." (italic ink-mute)

4. Card 1 — Live Leak Calculator (~520px tall)

- Clean white interior (95% opacity), glassmorphic exterior, 28px rounded corners
- Header strip: "LIVE LEAK CALCULATOR · 4 OF 12" + "AUTO-PLAYING" pill
- Top edge: 1 row fading up (35% opacity, dissolving upward with motion dots above) — this is the leaving leak
- Middle: 3 fully visible slim leak rows (each ~64px tall, hairline mint dividers, 40px mint→lime icon + label + description + dollar amount in mint→lime gradient on right)
- Bottom edge: 1 row sliding up from below (50% opacity, peeking 50% from below, motion dots below pointing up) — this is the next leak
- Below the rows: TOTAL bar — full-width, bright saturated mint→lime diagonal gradient background (matching the "Run my Mirror" button gradient exactly), 16px rounded corners, ~84px tall
- Inside TOTAL bar: "TOTAL MONTHLY LEAK" label on left in light mint, sub-label "All 12 leaks · 8-car rental average" in italic light mint, big number "-\$84,600" on right in bright mint→lime gradient text fill (saturated), tabular monospace, weight 800, ~36px, with small upward arrow ↑ in lime, plus tiny "+\$13,400" floating tag above showing the most recent addition

5. Gap text between cards

- "And money is not the only thing leaking..." (italic ink-mute, with two tiny mint dots flanking)

6. Card 2 — Reputation Damage (~340px tall)

- Same glassmorphic treatment as Card 1, clean white interior
- Header strip: "REPUTATION DAMAGE · 1 OF 12" + italic "can't be measured in dollars" label
- ONE LARGE FOCAL DAMAGE ROW (centered, dominant, takes ~70% of card content)

- Layout: 64px mint→lime gradient icon on left, middle column with damage name in 17px tabular small-caps weight 700 + 13px italic description (max 2 lines), right or below middle: large damage meter (200px wide × 12px tall pill, mint→lime gradient filled left, ink-mute empty right, ~28% filled), below meter: "-72% TRUST" in 14px tabular monospace mint→lime gradient weight 700
- Below the focal row: GHOSTED PEEK row at 35% opacity showing the next damage coming up (small icon + name + partial damage meter)
- Bottom: hairline mint divider + caption "Some things money can't buy back." (italic deep ink) + 12-dot pagination indicator + "1 / 12 · CYCLING" label

7. Primary CTA

- "Aiaura plugs every leak. Run my free audit →" — full-width mint→lime gradient pill, ~56px tall

Card 1 Animation Logic

- Every 3 seconds: top row fades up and out (600ms), simultaneously a new row slides up from bottom (700ms ease-out expo)
- TOTAL number ticks UP cumulatively (never subtracts) — adds the new row's value in 800ms ease-out quart animation
- Loops through all 12 financial leaks (~36 second full cycle), then pauses 8s and restarts
- Small particle effect: when row leaves, mint dots float upward toward the TOTAL bar (suggesting absorption)
- Reduced-motion: show static frame with "Tap to advance" affordance

Card 2 Animation Logic

- Same swipe-up pattern as Card 1, but cycling through 12 reputation damages
- Damage meter fills from 0% to its target percentage in 1.2s ease-out cubic when each damage becomes active
- No total row (intentional — qualitative loss is uncountable)

Content

Full list of 18 financial leaks and 18 reputation damages — see Appendix A, Sections A.4 and A.5.

8.4 — Meet the Team (Section 3 on the page)

Locked Design Reference

Purpose

Showcase all 12 AI products as a structured "team" organized into 3 departments. Each card has a cycling sub-line that rotates through 6+ capabilities per product, proving depth without overwhelming the page.

Layout

1. Section pill: "YOUR AI TEAM" in mint glassmorphic capsule with pulsing dot

2. Section heading (centered): "12 specialists. One platform."

- "12 specialists." in solid mint #10B981 weight 800
- "One platform." in italic mint→lime gradient

3. Sub-line: "Trained on your business. Working 24/7. Replace 8 vendors with one."

4. Three Department Sections

- Each department has a header label: "FRONT DESK · 4 STAFF" / "SALES & FOLLOW-UP · 4 STAFF" / "REPUTATION & GROWTH · 4 STAFF" (11px tabular small-caps mint weight 700, with mint divider lines on either side, centered)
- Below each label: 2x2 grid of glassmorphic product cards (~150px tall each, clean white interior, mint shadow, 16px rounded)

5. Each Product Card Layout

- 44px mint→lime gradient rounded-square icon top-left
- Product name in 14px sans-serif deep ink weight 700
- Cycling sub-line in 12px italic ink color (max 2 lines) — rotates through 6+ capabilities every 3.5 seconds
- Small dots indicator (5 dots, 1st highlighted in mint)
- Bottom-right corner: pulsing mint dot + tiny live mini-stat in 10px tabular small-caps mint
- AI Omnichannel Responder gets a small "WEDGE" badge in top-right corner (mint glass pill, 10px tabular small-caps weight 700)

6. Department + Product Mapping

- FRONT DESK: AI Receptionist · AI Omnichannel Responder (WEDGE) · AI Website Chatbot · AI Lead Qualifier
- SALES & FOLLOW-UP: AI Quote & Booking · AI Follow-up Assistant · AI Email + SMS Marketing · AI VIP Manager
- REPUTATION & GROWTH: AI Review Manager · AI Listing Optimizer · AI Social Manager · AI Customer Support

7. Connector visual between departments

- Subtle horizontal mint→lime gradient line connecting the 3 departments, suggesting they work together

8. Footer strip + CTA

- "One Aiaura subscription. All 12 staff. Live in 14 days." (italic ink-mute centered)
- Primary CTA: "See what they can do for you →" — full-width mint→lime gradient pill

Animation Specs — Cycling Sub-Lines

- Each card rotates its sub-line every 3.5 seconds with a smooth letter-by-letter blur fade transition (400ms)
- CRITICAL: cards cycle in a wave, not all at once. Stagger the start: card 1 cycles, then 0.5s later card 2, then 0.5s later card 3, etc. This creates calm motion instead of chaos.
- Mini live stats in card corners increment on a slow random interval (every 4–8s, +1 or +2)
- Reduced-motion: freeze sub-lines on capability #1, freeze stats

Content

Full capability cycling lines for all 12 products — see Appendix A, Section A.6 (~100+ lines).

8.5 — Why Aiaura Wins (Section 4A on the page)

Locked Design Reference

Purpose

Differentiation section. Three claims as numbered cards, with a massive "15+" hero stat anchoring the section. Editorial magazine feel — confident, sketched warmth.

Layout

1. Section pill: "WHY AIAURA WINS" in mint glassmorphic capsule

2. Section heading (left-aligned, large editorial)

- "Others promise help. We give you real results."
- "We give you real results." in mint→lime gradient text fill, weight 800
- Hand-sketched mint underline below the gradient phrase

3. Sub-line: "15+ US car rental owners chose Aiaura over simple AI tools. Here is the proof."

4. Hero Stat Block (centered, no card container)

- Massive "15+" in mint→lime diagonal gradient text fill, tabular monospace display, weight 800, ~96px (dominant)
- Hand-sketched mint underline above and below the giant number
- Below: "US Rental Owners Trust Aiaura" in 18px sans-serif deep ink weight 700, centered
- Below that: "Founders running 5 to 50 cars in Miami, LA, Las Vegas, Atlanta, and 11 more US cities — all running their front desk on Aiaura." (italic ink-mute, max-width 320px, centered)
- Two stat chips below: "14 DAYS to start" / "24/7 AI coverage" (small clean white glassmorphic mini-pills with mint→lime gradient numbers)

5. Three Numbered Reason Cards (vertical stack, ~160px tall each)

- Clean white glassmorphic background (95% opacity), hairline mint border (slightly imperfect/sketched), 16px rounded, soft mint shadow, subtle paper grain
- Top-left: mint highlight swipe (#A7F3D0 at 50% opacity, soft pencil-stroke edges) BEHIND the title
- Title: 17px sans-serif deep ink weight 700, sitting on the mint highlight
- Top-right: glassmorphic mint circle with card number ("01", "02", "03") — 40px circle, white 80% opacity, 1px mint border, mint number in tabular monospace weight 700
- Body: 14px sans-serif medium ink, weight 400, max 2 lines
- Bottom-left: small glassmorphic mint pill chip with hairline mint border, pulsing mint dot + descriptor in 12px mint weight 600

6. Card Content (LOCKED)

- CARD 01: "Built only for car rentals" / "This is not a simple chat tool. Our AI knows how to talk to rental customers about insurance, mileage, prices, and damage policies." / Pill: "AI that knows rentals"
- CARD 02: "60-day money-back promise" / "If Aiaura doesn't pay for itself in your first 60 days, we refund every cent. No fine print. No locked-in contracts." / Pill: "No-Risk Promise"

- CARD 03: "Ready in 14 days or less" / "Connects to your tools without technical work from you. While others take months, we start in just 14 days." / Pill: "Very fast setup"

Animation Specs

- Hero "15+" number counts up from 0 when scrolled into view (1.8s ease-out cubic)
- Cards fade-up + scale in ($0 \rightarrow 1$) staggered 200ms each on scroll into view
- Mint highlight swipe behind titles draws in left-to-right (600ms ease-out cubic)
- Sketched underlines have a "pen-draw" animation on first viewport entry (800ms)

8.6 — How You Go Live (Section 5 on the page)

Locked Design Reference

Purpose

Address the "how long does it take" objection. Vertical 14-day roadmap with 4 milestones along a mint→lime gradient line on the left side.

HONESTY NOTE

The previous build said "No developers. No IT." which set a wrong expectation. The locked design uses "We do the technical heavy lifting. You bring the keys to your accounts." — this is more honest and converts better.

Layout

1. Section pill: "HOW YOU GO LIVE" in mint glassmorphic capsule with pulsing dot

2. Section heading (centered)

- "From sign-up to fully live in 14 days." — sans-serif weight 700, ~32px deep ink
- "fully live" and "14 days" in mint→lime gradient text fill, weight 800
- Hand-sketched mint underline

3. Sub-line (centered): "We do the technical heavy lifting. You bring the keys to your accounts."

4. Vertical Timeline (left-side mint→lime gradient line, 3px thick, soft glow)

- 4 milestone dots along the line — each dot is a glassmorphic mint circle (40px, white 80% opacity, 1px mint border, mint number in tabular monospace weight 700)
- Each milestone card extends to the right of its dot

5. Milestone Cards (4 cards, ~140px tall each)

- Clean white glass, hairline mint border, 16px rounded, soft mint shadow, subtle paper grain
- Top: small day-range tag in mint pill (10px tabular small-caps weight 700) — "DAY 1", "DAY 1–3", "DAY 4–10", "DAY 11–14"
- Title: 16px sans-serif ink weight 700 with mint highlight swipe behind
- Body: 12px italic ink-mute, 1–2 lines max
- Bottom: small ✓ checklist of 2–3 specifics

6. Milestone Content (LOCKED)

- Milestone 01 — DAY 1: "Sign up & onboarding kickoff" / "30-minute call to align on your fleet, channels, and goals." / ✓ Onboarding manager assigned · ✓ Account created · ✓ Welcome packet sent
- Milestone 02 — DAY 1–3: "Connect your channels" / "We provision Twilio, verify Meta business, and connect your existing tools." / ✓ Phone & SMS · ✓ Instagram & Facebook · ✓ Email & WhatsApp
- Milestone 03 — DAY 4–10: "Train your AI" / "Guided sessions to teach Aiaura your fleet, rates, policies, and voice." / ✓ Fleet imported · ✓ Pricing rules set · ✓ Brand voice tuned
- Milestone 04 — DAY 11–14: "Go live (Test Mode first)" / "You approve every reply for 24-72 hours, then unlock Live Mode." / ✓ Test Mode active · ✓ First conversations · ✓ Switch to Live Mode

7. Final tagline below the roadmap

- "And on Day 15, your AI team is doing the work for you." (italic ink color, weight 500, centered)

Animation Specs

- Vertical mint→lime gradient line draws in top-to-bottom (1.2s) when section enters viewport
- Milestone dots and cards fade-up + scale in ($0 \rightarrow 1$) staggered 250ms each, top to bottom
- Mint highlight swipes behind titles draw in left-to-right
- Checkmarks animate in one at a time after each card lands

8.7 — Integrations / Aiaura at the Center (Section 6A on the page)

Locked Design Reference

Purpose

Show that Aiaura plugs into existing channels and tools — no migration. Animated orbital diagram with the Aiaura petal logo at center, channels orbiting on inner ring, operator tools orbiting on outer ring.

Layout

1. Section pill: "WORKS WITH YOUR STACK" in mint glassmorphic capsule with pulsing dot

2. Section heading (centered): "Aiaura sits at the center of your stack."

- "center" + "of your stack." in mint→lime gradient text fill, weight 800
- Hand-sketched mint underline

3. Sub-line (centered): "Connect every channel. Plug into every tool. Replace none of them."

4. Orbital Diagram (centerpiece, ~440px tall)

- Open canvas — clean off-white background, NO concentric circle lines drawn (per CEO feedback)
- Center: large glassmorphic mint→lime gradient orb (~120px circle), Aiaura petal logo inside (~80px), small "AIAURA" label below in 13px tabular small-caps mint weight 700 with pulsing mint dot

5. Two Animated Orbital Layers

- Layer 1 (inner orbit): 4 channel logos orbiting CLOCKWISE around the center
- Layer 2 (outer orbit): 4 operator-tool logos orbiting COUNTER-CLOCKWISE around the center (opposite direction creates premium visual depth)
- Logo rendering: NO white circle backgrounds behind logos — logos float as transparent icons in their natural brand colors
- Each logo has a tiny pulsing mint dot near it indicating "live integration"

6. Inner Orbit (Channels) — 4 logos visible

- Instagram · WhatsApp · Facebook Messenger · SMS (use chat-bubble icon for SMS in mint)

7. Outer Orbit (Operator Tools) — 4 logos visible

- HQ Rental · HubSpot · Stripe · Twilio

8. "+ 16 more" pill below the diagram

- Centered horizontally, glassmorphic mint pill (white 80% opacity, hairline mint border, 999px rounded, 36px tall)
- Text: "+ 16 MORE CHANNELS & TOOLS" in 13px tabular small-caps mint weight 700, with tiny "+" icon in mint→lime gradient circle on the left

- Tap behavior: opens an expandable panel showing the full integration list (see Appendix C)

9. Bottom Reassurance Strip

- Glassmorphic strip: small mint→lime gradient checkmark + "Keep what works. Aiaura adds what's missing." (14px sans-serif ink weight 700)
- Right side: "NO MIGRATION REQUIRED" mint pill (10px tabular small-caps weight 700)

Animation Specs

- Inner orbit (channels): rotates clockwise at ~40 seconds per full revolution
- Outer orbit (operator tools): rotates counter-clockwise at ~60 seconds per full revolution (slower, larger orbit)
- Each logo counter-rotates in place so it always faces upright (never tilts with the orbit)
- On hover/tap of any logo: orbit pauses, logo lifts with subtle scale + soft mint glow, glass tooltip shows integration name
- Reduced-motion: orbits pause, logos display in static positions

Logo List

Full integration logo list — see Appendix C.

8.8 — Questions You Can Not Answer (Section 7 on the page)

Locked Design Reference

Purpose

Position Aiaura as the answer to information darkness. Auto-cycling typewriter scene where each question types out, the buyer silently answers "no" in their head, then a checkmark appears showing Aiaura answered it. Bridges from "you don't know" to "Aiaura does."

Layout

1. Section pill: "THE QUESTIONS YOU CAN NOT ANSWER" in mint glassmorphic capsule with pulsing dot

2. Section heading (left-aligned): "Be honest. How would you answer these?"

- "How would you answer these?" in mint→lime gradient text fill, weight 800, italic
- Hand-sketched mint underline

3. Sub-line: "Aiaura answers every one of them — automatically."

4. Vertical Question Stack (centerpiece)

- 5 questions visible at any moment in italic display serif (Fraunces or PP Editorial New style)
- Position 1 + 2 (top): faded ~35% opacity, smaller (~16px), with a tiny mint→lime gradient checkmark on the right (showing Aiaura answered it)
- Position 3 (active, center): full opacity, large (~26px), italic display serif weight 600, deep ink color
- Active question has a soft mint highlight swipe behind it (#A7F3D0 at 40% opacity, soft pencil-stroke edges)
- Active question has a blinking mint cursor "|" at the end (mid-typewriter state)
- Below the active question: hand-sketched mint underline tracking under the typed text
- Position 4 + 5 (bottom): more faded ~25% and ~20% opacity, smaller, no checkmark yet (upcoming)

5. "AIAURA KNOWS →" pill

- To the right of the active question — small glassmorphic mint pill (white 80% opacity, hairline mint border, 999px rounded, 32px tall)
- Inside: tiny pulsing mint→lime gradient dot + "AIAURA KNOWS →" in 11px tabular small-caps mint weight 700

6. Progress Indicator (bottom of question stack)

- 10 small dots in a horizontal row, centered. Active dot (3rd) filled with mint→lime gradient + slightly larger + soft mint glow halo. Previous dots (1st + 2nd) solid mint (completed). Remaining 7 dots ink-mute.
- "3 OF 10 QUESTIONS · AUTO-CYCLING" in 10px tabular small-caps mint weight 700

7. Final Tagline Strip

- Clean glassmorphic strip with hairline mint border, 16px rounded, soft mint shadow
- Top line: "You don't know. Aiaura does." (16px sans-serif deep ink weight 700, "Aiaura does." in mint→lime gradient)

- Bottom line: "Tracks every answer automatically — across every channel, every customer, every booking." (12px italic ink-mute weight 400)

Animation Specs

- Active question types out letter-by-letter at ~30ms per character (typewriter effect)
- Blinking mint cursor "|" at the end of typed text (1s on, 1s off)
- After full question is typed: 2.5s hold for the buyer to read
- Then: question fades out + slides up to position 2 (becomes "completed", checkmark appears)
- Question at position 4 slides up to position 3 (becomes new active), starts typing
- Total cycle: ~6 seconds per question, ~60 seconds for all 10
- Reduced-motion: show static frame with manual prev/next arrows

Content

All 18 questions — see Appendix A, Section A.7.

8.9 — Track Everywhere (Section 8 on the page)

Locked Design Reference

Purpose

Address the "is there a real dashboard" question. Phone foreground + laptop backdrop both showing the same Aiaura dashboard. Floating mini-cards around the phone highlight key features (alerts, real-time sync, offline, multi-device).

FIX REQUIRED

In the locked mockup, the phone and laptop appear stretched/compressed at unrealistic ratios. In the live build, use ACTUAL device frame proportions: iPhone 14 Pro = 393×852 viewport ratio, MacBook = 16:10 screen ratio with proper bezel proportions.

Layout

1. Section pill: "ONE DASHBOARD · EVERY DEVICE" in mint glassmorphic capsule with pulsing dot

2. Section heading (left-aligned): "Your fleet. In your pocket. Or your laptop."

- "In your pocket." in solid mint #10B981 weight 800
- "Or your laptop." in italic mint→lime gradient
- Hand-sketched mint underline

3. Sub-line: "Same dashboard. Same data. Updated live across every screen you own."

4. Phone + Laptop Composition (~540px tall canvas)

- BACKDROP LAYER: stylized aluminum-silver MacBook in 3/4 perspective, ~75% opacity, soft mint→lime gradient halo glowing from behind
- Laptop screen displays desktop dashboard: narrow sidebar (mint-tinted glass) with 12 small AI product icons stacked, main canvas with wide row of 4 stat cards + line chart + horizontal activity feed, top-right "LIVE" badge with pulsing mint dot
- FOREGROUND LAYER: iPhone 14 Pro (in black phone frame, portrait), positioned center-left, sharp and crisp at full opacity, soft mint shadow underneath

5. Phone Screen (Aiaura Mobile Dashboard)

- Header: petal logo + "Aiaura Fleets" wordmark + small glass circular avatar + "TUE · APR 22 · LIVE" status with pulsing mint dot
- TOP HALF — 2x2 Stat Grid (4 cells, glassmorphic): "TODAY'S REVENUE \$24,800 ↑18%" / "CONVERSATIONS LIVE 47 (pulsing mint dot)" / "AVG RESPONSE TIME 4.2s ↑Faster than 92% of operators" / "HOT LEADS TODAY 8 ↑3 new this hour"
- Hand-sketched mint dashed divider with "LIVE ACTIVITY" small-caps label
- BOTTOM HALF — Activity Feed (glassmorphic container, 4 rows): AI Receptionist · Miami · "Booked 3-day Lambo" · \$14,400 / Instagram DM · Orlando · "Booked weekend rental" · \$8,200 / Email Reply · Tampa · "Booked weekend rental" · \$6,900 / + 1 more row
- All dollar amounts rendered in mint→lime gradient text fill

6. Floating Mini-Cards Around the Phone

- 4 small floating glassmorphic tiles at the corners of the phone (NW, NE, SW, SE)
- Each: ~60×60px, white 88% opacity, hairline mint border, 12px rounded, soft mint shadow, tilted at slight angles ($\pm 5^\circ$) like papers pinned to a board
- Hand-sketched mint dashed lines connect each mini-card to the phone
- Content: ALERTS (bell icon) / REAL-TIME (sync icon) / OFFLINE (cloud icon) / SYNCED (laptop+phone icon) — each labeled in 11px tabular small-caps mint weight 700

7. Mobile/Desktop Toggle Pill

- Centered below the composition. Glass pill (white 85% opacity, hairline mint border, 999px rounded, 36px tall, ~180px wide)
- Two segments: MOBILE (active, mint→lime gradient fill, white text) / DESKTOP (inactive, transparent, ink-mute text)
- Helper text above: "Tap to preview desktop view." (italic ink-mute)

8. Bottom Callout Strip

- Clean white glassmorphic, two columns: "Run your fleet from anywhere." (left, sans-serif ink weight 700) + "iOS · Android · Web · Desktop" (right, italic ink-mute) + tiny "ALL INCLUDED" mint pill

Animation Specs

- On scroll into viewport: phone slides up from bottom (800ms ease-out cubic), laptop slides in from right (1000ms with delay 200ms)
- Phone activity feed rows update every 4 seconds (top row fades, new row slides in from bottom)
- Stat numbers tick on slow random intervals
- Floating mini-cards animate in with staggered delay (200ms each), bobbing gently afterward (3deg rotate, 8px Y, 4s loop)
- Toggle pill is interactive — clicking DESKTOP segment swaps the visible foreground device to a laptop and the laptop backdrop to a phone
- Reduced-motion: static frame

8.10 — Footer (FAQ + Final CTA)

NO LOCKED SCREENSHOT

This section was discussed but the image-generation step was skipped. Build per spec below. The CEO will review the first build.

Purpose

Final conversion section. FAQ accordion answers the buyer's last objections + a final CTA strip + standard footer with company info.

Layout

1. Section pill: **"COMMON QUESTIONS"** in mint glassmorphic capsule
2. Section heading: **"Common questions, straight answers."** ("straight answers." in italic mint→lime gradient)
3. Sub-line: **"Still have questions? Book a 20-minute call — no sales pressure, just answers."**

4. FAQ Accordion

- 15 questions in collapsed state by default
- Each question row: clean white glassmorphic background (95% opacity), hairline mint border, 12px rounded, soft mint shadow, ~64px tall
- Question text in 14px sans-serif deep ink weight 600
- Right side: glassmorphic mint circle with "+" icon (rotates to "x" when expanded)
- Click to expand: smooth height animation (300ms), reveals answer in 13px sans-serif ink-mute, weight 400, line-height 1.55, padding 16px
- Only one open at a time (auto-close others when one opens)

5. Talk to Us pill (above the FAQ list)

- Small glassmorphic mint pill (white 70% opacity, hairline mint border, 999px rounded, 36px tall)
- Inside: pulsing mint dot + "Talk to Us →" in 13px sans-serif mint weight 700
- Links to a contact form or Calendly

6. Final CTA Strip

- Dark glassmorphic strip OR soft mint card — TBD with CEO. Default: clean white glass with mint→lime gradient CTA inside
- Headline: "Ready to see what you're missing?" (28px sans-serif deep ink weight 700)
- Sub-line: "Run a free 5-minute audit and see the leaks Aiaura would plug for you."
- Primary CTA: "Run my Mirror →" (mint→lime gradient pill, ~56px tall)

7. Footer

- Logo + wordmark on left
- 3 columns of links: Product (Features, Integrations, Pricing) / Company (About, FAQ, Contact) / Legal (Privacy, Terms)
- Bottom line: "© 2026 Aiaura Fleets. Built for US car rental operators."
- Small social icons (LinkedIn, X, YouTube) in mint, all aligned right

FAQ Content

All 15 FAQ questions and answers — see Appendix D.

Section 9 — Business Rules

These rules apply across the entire landing page. Any deviation must be flagged and approved by the CEO.

Brand Color Palette (LOCKED)

Mint (primary)	#10B981 — used for primary brand accent, gradient start, mint glows
Lime (accent)	#84CC16 — used for gradient end, accent moments
Deep mint (dark)	#065F46 — used for hover states on mint elements
Deep ink	#0A2620 — primary text color (replaces black)
Ink-soft	#2D4F47 — secondary text color (body, sub-headlines)
Ink-mute	#6B7F78 — tertiary text color (captions, helpers)
Background paper	#FAFAF8 — page background (off-white, warm)
Background mint	#F0FAF5 — top of vertical gradient on some sections
Background mint-cream	#F8FCFA — bottom of vertical gradient
Mint-light	#A7F3D0 — used for subtle highlights, mint highlight swipes behind titles
Mint-ghost	#ECFDF5 — used for very faint mint backgrounds inside pills

STRICTLY OFF-BRAND

NEVER use red, pink, yellow, orange, purple, blue, or any non-mint accent color anywhere on the landing page. If a UI pattern (success/error states) requires color differentiation, use shades of mint and lime only. Do not introduce new colors.

Mint→Lime Gradient (LOCKED)

The signature gradient appears on: primary CTA buttons, headline accent words, gradient text fills, the leak calculator TOTAL bar, gradient halos behind key elements.

- Direction: Diagonal from upper-left to lower-right
- Start: Deep mint #10B981 at upper-left (saturated)
- End: Bright lime #84CC16 at lower-right (saturated)
- NO harsh transition line — smooth blend
- Reference button: "Run my Mirror →" — match this exact gradient saturation everywhere

Typography Rules (LOCKED)

- Sans-serif body/headings: Use a confident modern sans-serif (Geist, General Sans, Inter Display, or PP Neue Montreal). Default to Inter or system-ui if those are unavailable.
- Display serif (for italic editorial moments and pull-quotes): Fraunces, PP Editorial New, or Tobias style.
- Tabular monospace (for numbers, timestamps, small-caps labels): JetBrains Mono Display, IBM Plex Mono, or SF Mono.
- Headline weights: 700 default, 800 for accent words
- Body weights: 400 default, 500 for emphasized words, 600 for sub-headings
- Small-caps labels: 11px tabular monospace, weight 700, letter-spacing 0.06em–0.08em
- Headline scale: 42px on mobile, 56px on desktop
- Body scale: 14–16px on mobile, 16–18px on desktop
- Line-height: 1.55 for body, 1.05–1.25 for headlines

Glassmorphic Card Rules

- White interior: 95% opacity (clean and crisp), backdrop-filter blur 28px on perimeter
- Border: 1.5px white inner border on top edge (creates "light from above" highlight) + 0.5px hairline mint border on remaining sides
- Shadow: multi-layered (mint #10B981 at 18% opacity, 24px blur, 8px Y-offset) + (ink at 8% opacity, 40px blur, 16px Y-offset)
- Corner radius: 16px for small cards, 24px for medium cards, 28px for large hero cards
- Inner content area: clean white (no busy background tints inside the card)
- Subtle paper grain texture on background canvas only, NOT inside cards

Animation Rules

- All animations target 60fps on mobile and desktop
- Default easing: ease-out cubic [0.16, 1, 0.3, 1] (Apple-style)
- Number count-ups: 1.8s with ease-out cubic
- Card reveals on scroll: 600ms with 200ms staggered delay between cards
- Carousel/cycling transitions: 400–600ms cross-fade
- Typewriter effect: ~30ms per character
- Reduced-motion: ALL motion respect prefers-reduced-motion media query — disable cycling, typewriter, count-ups, and orbital rotation

Mobile-First Rules

- Design for 375px viewport first (iPhone SE), then scale up
- Test viewports: 375px, 414px (iPhone Plus), 768px (iPad), 1280px (laptop), 1920px (desktop)
- All touch targets minimum 44×44px
- Text inputs (if any) minimum 16px font-size to prevent iOS zoom on focus
- Use `100dvh` not `100vh` for full-screen sections (iOS Safari fix)

- Backdrop-filter blur reduced from 28px to 16px on mobile (battery/performance)
- Falling money particle counts and orbital animation speed reduced on mobile

Accessibility Rules (WCAG AA)

- All text must meet 4.5:1 contrast against its background (3:1 for headings ≥ 18 px bold)
- All interactive elements must be keyboard-navigable (Tab, Shift+Tab, Enter, Escape)
- Focus rings: 2px mint outline with 2px offset on focused elements
- Alt text on all images and icon-only buttons
- Animations respect prefers-reduced-motion
- Color is never the only signal (success/error must also have icons or labels)
- FAQ accordions must be operable via keyboard (Enter/Space to toggle)
- All form inputs (CTAs that route to forms) must have visible labels

Section 10 — Acceptance Criteria

The feature is DONE when ALL of the following are true. Each criterion is a binary checkbox.

Global Page Criteria

- ☐ Page loads in under 2.0 seconds on mobile 4G (Lighthouse Mobile Performance score ≥ 85)
- ☐ Lighthouse Accessibility score ≥ 90
- ☐ Lighthouse Best Practices score ≥ 90
- ☐ Lighthouse SEO score ≥ 90
- ☐ Page renders correctly on iPhone SE (375px), iPhone 14 Pro (393px), iPad Mini (768px), MacBook (1280px), and Desktop 1920px without horizontal scroll
- ☐ No console errors in Chrome DevTools or Safari Web Inspector
- ☐ All animations run at 60fps (verified in Chrome DevTools Performance tab)
- ☐ Reduced-motion media query disables all cycling, typewriter, and orbital animations
- ☐ All text passes WCAG AA contrast (4.5:1 minimum)
- ☐ All interactive elements are keyboard-navigable with visible focus rings
- ☐ Brand color palette strictly enforced (no off-brand colors anywhere)
- ☐ Mint→lime gradient on CTAs matches the locked reference exactly

Section-by-Section Criteria

Hero (Section 1)

- ☐ Top nav renders with logo, wordmark, "Get audit →" CTA, and menu icon
- ☐ Live cycling pill rotates through 30+ messages every 4 seconds with letter-fade transition
- ☐ Headline displays "Your phone rings at 2:14 AM. Aiaura picks up. You sleep." with correct color treatment
- ☐ Cycling channel card renders 5 channels (Instagram DM, iMessage SMS, WhatsApp, iPhone Call, Gmail) with typewriter conversation animation
- ☐ Each channel card shows correct content from Appendix A.2
- ☐ Two CTAs visible and tappable: "See what you're losing →" (primary) and "Watch 90-sec demo" (secondary)
- ☐ Trust line shows "Trusted by rental shops in Miami, LA, Las Vegas, Scottsdale, and 14 more US cities."

Real Results (Section 2A)

- ☐ Carousel auto-advances every 4 seconds with smooth slide transition
- ☐ Active card shows mint→lime gradient dollar amount, product name, attribution, context tag
- ☐ Previous and next cards peek 15% from each side (slightly faded)
- ☐ 12-dot pagination indicator updates with each cycle

- ☐ Anchor stat strip shows "\$2.4M Recovered · 47 US cities · 312 conversations live now" with mint→lime gradient numbers

The Leak (Section 2B)

- ☐ Card 1 (Live Leak Calculator) renders with 3 visible rows + dark TOTAL bar
- ☐ TOTAL bar uses mint→lime gradient background (NOT black/ink)
- ☐ Top row fades up + bottom row slides up every 3 seconds
- ☐ TOTAL number ticks UP cumulatively (never subtracts)
- ☐ Card 2 (Reputation Damage) shows ONE focal damage row + 1 ghosted peek below
- ☐ Damage meter fills from 0 to target percentage when each damage becomes active
- ☐ Final CTA "Aiaura plugs every leak. Run my free audit →" is tappable

Meet the Team (Section 3)

- ☐ 3 department headers render: FRONT DESK · 4 STAFF / SALES & FOLLOW-UP · 4 STAFF / REPUTATION & GROWTH · 4 STAFF
- ☐ 12 product cards render in 2x2 grids per department
- ☐ Each card has 44px gradient icon, product name, cycling sub-line, dots indicator, mini live stat
- ☐ Cycling sub-lines rotate every 3.5 seconds in a staggered wave (not all at once)
- ☐ AI Omnichannel Responder shows "WEDGE" badge
- ☐ All 12 products map to correct departments per the spec

Why Aiaura Wins (Section 4A)

- ☐ Hero "15+" stat counts up from 0 when scrolled into view
- ☐ Hand-sketched mint underlines render correctly above and below the giant number
- ☐ 3 numbered cards render with mint highlight swipes behind titles
- ☐ Mint glass numbered circles (01, 02, 03) appear in top-right of each card
- ☐ Mint pill chips at bottom of each card show: "AI that knows rentals" / "No-Risk Promise" / "Very fast setup"

How You Go Live (Section 5)

- ☐ Vertical mint→lime gradient line renders on the left side
- ☐ 4 milestone dots aligned along the gradient line
- ☐ 4 milestone cards extend to the right of each dot with day-range tags
- ☐ Day tags display: DAY 1 / DAY 1–3 / DAY 4–10 / DAY 11–14
- ☐ Each card shows checklist items
- ☐ Final tagline "And on Day 15, your AI team is doing the work for you." displays below

Integrations (Section 6A)

- ☐ Central Aiaura petal logo orb renders with mint→lime gradient halo
- ☐ Inner orbit (4 channel logos) rotates clockwise at ~40 seconds per revolution
- ☐ Outer orbit (4 operator-tool logos) rotates counter-clockwise at ~60 seconds per revolution
- ☐ Logos render WITHOUT white circle backgrounds (transparent floating)
- ☐ Logos counter-rotate in place to stay upright

- ☐ "+ 16 MORE CHANNELS & TOOLS" pill displays below the diagram
- ☐ Bottom callout: "Keep what works. Aiaura adds what's missing." + "NO MIGRATION REQUIRED" pill

Questions You Can Not Answer (Section 7)

- ☐ 5 questions visible at any moment in italic display serif
- ☐ Active question (position 3) types out letter-by-letter at ~30ms per character
- ☐ Active question has mint highlight swipe behind it
- ☐ Blinking mint cursor "|" at end of typed text
- ☐ Hand-sketched mint underline tracks under typed portion
- ☐ "AIAURA KNOWS →" pill appears beside active question
- ☐ Past questions (1, 2) show with checkmarks
- ☐ Upcoming questions (4, 5) faded
- ☐ 10-dot progress indicator + "3 OF 10 QUESTIONS · AUTO-CYCLING" label
- ☐ Final tagline "You don't know. Aiaura does." displays in glassmorphic strip

Track Everywhere (Section 8)

- ☐ Phone foreground (iPhone 14 Pro frame, sharp) + laptop backdrop (~75% opacity)
- ☐ Phone and laptop use REALISTIC device proportions (not stretched/compressed)
- ☐ Phone screen displays Aiaura mobile dashboard with 2x2 stat grid + activity feed
- ☐ Laptop screen displays Aiaura desktop dashboard
- ☐ 4 floating mini-cards around phone with hand-sketched dashed connectors: ALERTS / REAL-TIME / OFFLINE / SYNCED
- ☐ MOBILE/DESKTOP toggle pill is interactive (clicking DESKTOP swaps the visible foreground device)
- ☐ Bottom callout: "Run your fleet from anywhere." + "iOS · Android · Web · Desktop" + "ALL INCLUDED" pill

Footer (FAQ + Final CTA)

- ☐ 15 FAQ questions render in accordion (collapsed by default)
- ☐ Each accordion expands smoothly (300ms) and only one is open at a time
- ☐ FAQ schema markup is added to the page HTML for AI search visibility (ChatGPT, Perplexity, Google AI)
- ☐ Final CTA strip displays with primary "Run my Mirror →" button
- ☐ Footer has logo, 3 columns of links, copyright line, social icons

Section 11 — Deadline / Dependencies

Target ready-by date	_____ (CEO to fill)
Hard deadline	_____ (CEO to fill)
First reviewable build	7 working days after kickoff
Final reviewable build	14 working days after kickoff
Sprint length	2 weeks (per CEO Instructions)

Dependencies

- Brand assets: Aiaura petal logo (PNG + SVG, transparent background) — provided
- "Run my Mirror" gradient button reference — provided
- All locked screenshots (9 sections) — embedded in this document
- Master content library — see Appendix A
- Integration logo files (Instagram, WhatsApp, Facebook Messenger, SMS, HQ Rental, HubSpot, Stripe, Twilio + 16 more) — to be provided by CEO or sourced by developer per Appendix C
- Domain: aiaurafleets.com (or as specified by CEO)
- Hosting: Vercel (recommended) or developer's preference
- Analytics: Google Analytics 4 property ID (CEO to provide)
- Calendly link for "Book strategy call" CTA (CEO to provide)
- "/audit" or "/mirror" route — separate page; this requirement document covers ONLY the landing page

Recommended Tech Stack (Developer Decision)

- Framework: Next.js 14+ (App Router) with TypeScript
- Styling: Tailwind CSS 3.4+ with custom theme tokens for the brand palette
- Animation: Framer Motion 11+ for all motion
- Fonts: Inter (sans-serif), Fraunces or PP Editorial New (display serif), JetBrains Mono (monospace) — load via @fontsource or self-host
- Icons: Custom SVGs in mint→lime gradients (no Feather/Heroicons/Lucide as default style)
- Hosting: Vercel (free tier supports this scale)
- Image optimization: Next.js Image component for all photographic assets

Section 12 — Open Questions

The developer should answer these in writing before development begins. Some require CEO input; some can be decided by the developer with documented reasoning.

Questions for the CEO

- 1. Domain: confirm "aiaurafleets.com" or provide alternative.
- 2. Calendly URL for the "Book a strategy call" CTA.
- 3. The "/audit" or "/mirror" page already exists at a separate URL — confirm the CTA destination.
- 4. Google Analytics 4 property ID for analytics integration.
- 5. Cookie consent banner — required (GDPR/CCPA jurisdictions) or skip for now?
- 6. Calendar/Calendly integration — does the "Talk to Us" pill in the FAQ section open a Calendly modal or route to a contact form?
- 7. Demo video for the "Watch 90-sec demo" CTA — does this exist? If yes, provide hosting URL (YouTube, Vimeo, Mux). If no, hide the secondary CTA in v1.
- 8. Confirm: are real customer testimonials available, or skip the testimonial logo strip entirely?
- 9. Footer link destinations (Privacy Policy, Terms of Service URLs)?
- 10. Social media handles for footer icons (LinkedIn, X/Twitter, YouTube)?

Questions for the Developer (decide and document)

- 1. State management for cycling animations — single global animation orchestrator or per-section state? (Recommend: per-section with Intersection Observer to pause off-screen)
- 2. SEO implementation — how to handle the FAQ schema (JSON-LD in <head>, sufficient for both Google and AI search visibility)
- 3. Image optimization strategy for the integration logos (use SVG for vector logos like Instagram/WhatsApp; use Next.js Image for raster logos like HQ Rental)
- 4. Mobile detection for backdrop-filter blur reduction — CSS-only @media query OR JS-based device detection?
- 5. Animation performance budget — what is the maximum DOM node count and animation count before mobile performance degrades?

CEO Sign-Off

I have reviewed this Requirement Document and approve it for development.

28. "Aiaura captured a 5-star Google review from a happy renter"
29. "Aiaura updated 14 Google Business photos this morning"
30. "Aiaura sent a personalized birthday offer to a VIP customer"
31. "Aiaura screened 31 leads as Junk so the team focused on Hot ones"
32. "Aiaura is handling a 24/7 service ticket in Tampa"
33. "Aiaura just synced a customer record across 3 channels"
34. "Aiaura flagged an under-21 booking attempt in Phoenix"
35. "Aiaura responded to a TikTok DM in 5 seconds in Nashville"

A.2 — Hero Cycling Channel Card Conversations (5 channel scripts)

Each script runs ~7 seconds. Customer messages slide in from left; AI responses type out letter-by-letter.

A.2.1 — INSTAGRAM DM (Miami) · Card 1 of 5

Header: "AI OMNICHANNEL · INSTAGRAM · MIAMI"

Conversation:

- Customer (gray bubble, left): "Yo is the Lambo Aventador available May 5?"
- Pause 1.5s
- Aiaura (gradient bubble, right, types): "Yes! May 5 confirmed. \$4,800/day with 100 miles included. 1 day or longer?"
- Lightning bolt pill: "AIAURA · 4s response"
- Customer: "3 days, May 5–7"
- Aiaura (types): "\$14,400 + \$5K deposit. Sending booking link..."
- Caption fades in: "\$14,400 booked from a DM at 11:47 PM"

A.2.2 — iMESSAGE SMS (Las Vegas) · Card 2 of 5

Header: "AI OMNICHANNEL · TEXT MESSAGE · LAS VEGAS"

Conversation (uses native iOS iMessage UI — blue outgoing bubbles, gray incoming):

- Customer: "How much for Range Rover this weekend?"
- Aiaura (blue iMessage bubble, types): "Range Rover Sport — \$1,200/day, weekend rate. Total \$3,600. Want to lock it in?"
- Status indicator: "Delivered" + lightning bolt pill: "AIAURA · 6s response"
- Customer: "Yes please"
- Aiaura (types): "Sending Stripe link now. Takes 90 seconds."
- Caption: "\$3,600 weekend booking · F1 weekend Vegas"

A.2.3 — WHATSAPP (Miami, Spanish) · Card 3 of 5

Header: "AI OMNICHANNEL · WHATSAPP · MIAMI"

Conversation (uses native WhatsApp UI — green outgoing, white incoming, double-checkmark indicators):

- Customer (white bubble): "¿Hola, tienen el Range Rover para este fin de semana?"
- Aiaura (green bubble, types): "¡Hola Maria! Sí, viernes a domingo disponible. \$3,600 + depósito. ¿Te interesa?"
- Mint pill: "AIAURA · 6s · Replied in Spanish 🇪🇸"
- Customer: "¡Sí! ¿Cómo reservo?"
- Aiaura (types): "Te envío el enlace ahora..." with ✓ ✓ blue read receipt
- Caption: "\$3,600 booked from a Spanish-speaking tourist in 4 minutes"

A.2.4 — iPHONE CALL (Miami) · Card 4 of 5

Header: "AI RECEPTIONIST · CALL · MIAMI"

Visual (uses native iOS call screen — dark blurred mint wallpaper):

- Top: "+1 (305) 555-0199" centered, "Miami, FL · Mobile" below
- Center: live audio waveform animating in mint→lime gradient
- Glass pill: "AIAURA SPEAKING · 0:14 ELAPSED"
- Live transcript bubbles below (faded over dark background):
- Caller: "Hi, do you have a Lambo for this weekend?"
- Aiaura: "Yes! May 5–7 confirmed. \$14,400 for 3 days with deposit. Want me to lock it in?"
- Bottom: glass call control buttons (mute, end, speaker, record) — slightly faded
- Caption: "\$14,400 booked at 2:14 AM while operator slept"

A.2.5 — GMAIL (Atlanta, Corporate) · Card 5 of 5

Header: "AI OMNICHANNEL · EMAIL · ATLANTA"

Visual (uses native Gmail UI):

- Subject: "Wedding party · 6 vehicles"
- Sender: "Sarah Chen · Premier Events"
- Body (fades in): "I'm coordinating a wedding May 25–30 and need 6 luxury vehicles. Can you accommodate?"
- Pause 2s
- Aiaura's reply types out (threaded reply indented): "Hi Sarah — congratulations! For May 25–30 we have: Aventador, Range Rover, G-Wagon, Bentley + 2 more. Group rate: \$48,000. Want a call to discuss?"
- Mint pill: "AIAURA · 22s response"
- Caption: "\$48,000 corporate inquiry handled while operator was off"

A.3 — Real Results Carousel (30 cards)

Format: [PRODUCT NAME] · [Big number / amount] · [Action description] · [Operator name, City] · [Date] · [Optional context tag]

01. **AI RECEPTIONIST · \$14,400** · Booked from a 2:14 AM call · *Carlos M., MVP Miami* · April 18 · *Lambo Aventador · 3-day rental*
02. **AI OMNICHANNEL · \$4,800** · Weekend rental closed in 4 minutes via Instagram DM · *Royalty Vegas* · April 22 · *Lamborghini Huracán*
03. **AI LEAD QUALIFIER · 47 Hot leads** · Flagged from \$2.1M of inquiries · *LA Exotic* · April · *218 leads scored total*

25. **AI OMNICHANNEL · 73 IG comments** · Auto-DM'd in 4 seconds each · *Las Vegas Exotic* · F1 weekend · 12 booked from comments
26. **AI LEAD QUALIFIER · -\$50,000** · Junk leads filtered before sales touched them · *LA Premium* · April · Saved 14 hours of sales time
27. **AI FOLLOW-UP · 21-day reactivation** · Past customer booked 21 days after last rental · *Scottsdale Luxury* · April 30 · \$12,800 weekend rental
28. **AI QUOTE & BOOKING · 6 seconds** · Fastest quote-to-send time on record · *MVP Miami* · April 28 · Aventador · 2 days
29. **AI VIP MANAGER · Silver/Gold/Platinum** · Tracked across 1,200 customers · *Atlanta Premium* · April · Avg LTV per Platinum: \$42K
30. **AI BOOKING PROTECTOR · -\$12,000** · Fraud attempt flagged before deposit cleared · *Tampa Luxury* · April 17 · International chargeback risk

A.4 — Scene 2B Card 1: Financial Leaks (20 entries)

Each entry: PROBLEM NAME · context tag · description · monthly \$ loss · research note

01. **MISSED CALLS** · *After hours*
They call at 2 AM. You're asleep. Competitors aren't.
\$26,800/mo
Note: Module 7 — biggest single leak for Tier M operators
02. **INSTAGRAM DMs** · *Ghosted 4+ hours*
They message at midnight. You see it Monday morning.
\$18,200/mo
Note: Critical for luxury operators — IG is #1 lead source
03. **SLOW QUOTES** · *8 hours late*
First quote wins 78% of the time. Yours is too late.
\$11,400/mo
Note: 2026 industry speed-to-lead benchmark
04. **DEAD CRM** · *10K contacts ignored*
Past customers never hear from you. They book competitors.
\$14,800/mo
Note: Reactivation engine pain — proposal-validated
05. **NO REVIEWS** · *3 in 6 months*
No new Google reviews. Ranking drops. Leads dry up.
\$13,400/mo
Note: Review velocity directly impacts Google Business ranking
06. **IG COMMENT LEAKS** · *Never DM'd back*
73 comments asking "price?" Zero auto-replies sent.
\$9,800/mo
Note: Auto-DM is the highest-leverage IG feature
07. **WEEKEND SUPPORT GAP** · *Sat night silence*
Active renters need help. Nobody picks up. Bad reviews follow.
\$7,600/mo
Note: F1/Coachella weekend disasters — high-value spike windows
08. **MISSED UPSELLS** · *Never offered*
Add-ons, multi-day discounts, insurance — left on the table.
\$8,200/mo
Note: Tier M operators average \$200-800 missed per booking
09. **NO MULTILINGUAL** · *Spanish/Portuguese tourists*
Hispanic and Brazilian renters book competitors who speak their language.
\$11,000/mo
Note: Critical for Miami, LA, Houston, Orlando markets
10. **CHARGEBACKS** · *International disputes*
Tourist disputes you can't fight. \$5K+ losses you eat silently.
\$5,400/mo
Note: 0.75% chargeback rate on luxury rentals — Visa high-risk category
11. **STALE GOOGLE LISTING** · *Bad photos, no posts*
Your Business Profile hasn't updated in 4 months. Click-through dropping.
\$4,800/mo
Note: Affects Maps Pack ranking + paid ads quality score

12. **NO BOOKING FOLLOW-UP** · *Quote sent. Crickets.*
You sent the quote. They went silent. You never chased. Booking = lost.
\$6,200/mo
Note: Follow-up sequences recover 18-32% of dormant quotes
13. **IGNORED FACEBOOK MESSENGER** · *47 unread DMs*
Older luxury renters use Facebook. You never check.
\$3,800/mo
Note: Older demographic = higher LTV per customer
14. **SUNDAY EVENING DEAD ZONE** · *No one on call*
Renters plan their weekends Sunday night. You're off.
\$5,600/mo
Note: 38% of weekend booking inquiries arrive Sun 7-11 PM
15. **VOICEMAIL BLACK HOLE** · *47% never returned*
They leave a message. You don't call back. They book elsewhere.
\$9,200/mo
Note: Voicemail return rate industry average: 53%
16. **NO TIKTOK PRESENCE** · *Younger HNW lost*
Younger affluent buyers research on TikTok. You're invisible.
\$4,400/mo
Note: Tier S/M operators losing 18-29 demographic
17. **LATE-NIGHT FORMS** · *Submitted after 9 PM*
Website forms submitted at night. You see them Monday.
\$7,800/mo
Note: 24% of luxury rental form submissions arrive 9 PM–6 AM
18. **EVENT-DRIVEN SPIKES** · *F1 / Super Bowl / Coachella missed*
Demand spikes 5x. Your team was sized for normal volume.
\$28,400/mo (event months)
Note: Spike months = 3x normal monthly leak
19. **INSURANCE VERIFICATION DELAY** · *Lost while waiting*
Customer ready to book. Insurance check takes 4 hours. They book elsewhere.
\$6,800/mo
Note: Real-time verification is a Tier L+ differentiator
20. **LANGUAGE BARRIER ESCALATIONS** · *Routed to wrong staff*
Spanish speaker calls. Reaches English-only staff. Hangs up.
\$3,400/mo
Note: Multilingual handoff industry-validated for FL/CA/TX

A.5 — Scene 2B Card 2: Reputation Damage (20 entries)

Format: DAMAGE NAME · status · description · damage meter (% drained) · numerical proof · research note

01. **BRAND REPUTATION** · *Damaged*

Forum threads and Reddit complaints pile up. Your name is mentioned wrong.

Damage meter: 28% filled · **-72% TRUST**

Note: Once damaged, takes 12-18 months to recover

02. **VIP CUSTOMERS** · *Lost forever*

High-LTV repeat customers book a competitor once. They never come back.

Damage meter: 32% filled · **-12 PLATINUM CUSTOMERS**

Note: Each Platinum LTV is \$40-80K over 3 years

03. **WORD OF MOUTH** · *Reversed*

Happy customers tell 3 people. Unhappy ones tell 11. The math is brutal.

Damage meter: 22% filled · **-47 REFERRALS LOST**

Note: Industry-validated word-of-mouth ratio (Bain & Co.)

04. **GOOGLE RANKING** · *Slipping*

Page 1 to page 2. Your competitors moved up while you stood still.

Damage meter: 35% filled · **-4 POSITIONS DROP**

Note: Each position drop = ~30% click-through loss

05. **INSTAGRAM CREDIBILITY** · *Eroding*

Engagement rate drops. Algorithm punishes inactive responders.

Damage meter: 30% filled · **-38% REACH**

Note: 2026 algorithm prioritizes responsive accounts

06. **REPEAT BOOKINGS** · *Disappearing*

Returning customer rate falls below industry average. They forget you.

Damage meter: 25% filled · **-24% REPEAT RATE**

Note: Industry benchmark: 35-40% repeat rate for healthy luxury operators

07. **PRICING POWER** · *Eroded*

Without strong reviews, you can't charge premium. You discount to compete.

Damage meter: 38% filled · **-18% AVG DAILY RATE**

Note: Premium pricing requires top-quartile review velocity

08. **STAFF MORALE** · *Burnt out*

Your team handles chaos manually. Turnover spikes. Hiring costs rise.

Damage meter: 33% filled · **-2 STAFF QUIT THIS YEAR**

Note: Replacement cost per ops hire = \$8-15K

09. **INSURANCE PARTNERS** · *Hesitant*

Claim history rises with rushed bookings. Premiums increase. Coverage tightens.

Damage meter: 40% filled · **+22% PREMIUM HIKE**

Note: Damage disputes correlate with operator response speed

10. **MARKET POSITION** · *Slipping*

Newer AI-powered operators move faster. Your share of voice drops.

Damage meter: 27% filled · **-3 RANK ON AI SEARCH**

Note: ChatGPT/Perplexity citations becoming critical lead source

11. **CUSTOMER LOYALTY** · *Fragile*

Every missed message, every late reply — they remember.

Damage meter: 30% filled · **-51% NPS SCORE**

Note: NPS is the strongest predictor of repeat business

12. **PRESS & CREATOR INTEREST** · *Cooling*
Local food/lifestyle creators stop tagging you. PR opportunities go to active brands.
Damage meter: 35% filled · **-9 BRAND MENTIONS**
Note: Influencer ecosystem critical for Miami/LA/Vegas luxury
13. **SOCIAL PROOF FLYWHEEL** · *Stalled*
No fresh user-generated content. Your feed looks dead.
Damage meter: 42% filled · **-68% UGC POSTS**
Note: UGC drives 4.5x higher conversion than brand content
14. **YELP RATING TRAJECTORY** · *Declining*
One bad weekend takes you from 4.7 to 4.3. Hard to climb back.
Damage meter: 26% filled · **-0.4 STARS**
Note: Yelp algorithm caps top-of-search at 4.5+
15. **TRIPADVISOR RANK** · *Falling*
International tourists check before booking. You drop in their search.
Damage meter: 38% filled · **-12 RANK POSITIONS**
Note: Critical for Miami/Vegas international tourist traffic
16. **CORPORATE CONTRACT TRUST** · *Eroded*
Slow response cost a \$48K corporate booking. They tell other companies.
Damage meter: 45% filled · **-2 LOST CONTRACTS**
Note: Corporate referral chains: one loss = 2-3 follow-on losses
17. **INFLUENCER COLLABORATIONS** · *Drying up*
Local influencers stop pitching you. They go to competitors.
Damage meter: 33% filled · **-6 COLLABS THIS QUARTER**
Note: Influencer drought is leading indicator of brand decline
18. **REPEAT-CUSTOMER DATABASE** · *Decaying*
10,000 contacts you never message. They forget you exist.
Damage meter: 50% filled · **-47% LIST FRESHNESS**
Note: Email lists decay 22% per year without engagement
19. **WEEKEND BRAND PRESENCE** · *Invisible*
You don't respond Saturday night. Competitors do. They win the recommendation.
Damage meter: 40% filled · **-68% SAT/SUN MENTIONS**
Note: Weekend visibility correlates with luxury booking volume
20. **EMPLOYEE ADVOCACY** · *Negative*
Burned-out staff post complaints on Glassdoor and Reddit.
Damage meter: 30% filled · **-1.2 GLASSDOOR RATING**
Note: Glassdoor rating impacts hiring + customer perception

A.6 — Section 3 (Meet the Team): Product Capability Cycling Lines

Each of the 12 products has 8 cycling capability lines. Cards rotate every 3.5 seconds in a staggered wave.

AI RECEPTIONIST [FRONT DESK]

Icon: phone · Live stat: "47 calls today"

1. "Picks up calls 24/7"
2. "Talks in 22+ languages"
3. "Detects caller sentiment in real-time"
4. "Pushes leads into your CRM automatically"
5. "Live-transfers VIP callers to you"
6. "Records and transcribes every call"
7. "Handles voicemail follow-up"
8. "Routes Spanish calls in Spanish"

AI OMNICHANNEL RESPONDER [FRONT DESK] [WEDGE]

Icon: chat · Live stat: "312 conversations live"

1. "Replies on Instagram, SMS, WhatsApp, Email"
2. "Auto-DMs Instagram commenters in 4 seconds"
3. "Recognizes returning customers across channels"

4. "Updates calendar atomically"
5. "Handles deposits and full payments"
6. "Applies event-driven pricing rules"
7. "Calculates multi-day discounts"
8. "Sends booking confirmations"

AI FOLLOW-UP ASSISTANT [SALES & FOLLOW-UP]

Icon: refresh · Live stat: "\$8.2K recovered"

1. "Recovers abandoned quotes after 24 hours"
2. "Reactivates 90-day past customers"
3. "Re-engages on birthdays & anniversaries"
4. "Cross-channel nudges (DM → SMS → Email)"
5. "Stops the moment customer replies"
6. "Personalized timing per customer"
7. "A/B tests follow-up messages"
8. "Tracks open and reply rates"

AI EMAIL + SMS MARKETING [SALES & FOLLOW-UP]

Icon: envelope · Live stat: "247 contacts emailed"

1. "Builds campaigns from a 1-line prompt"
2. "Texts past customers TCPA-compliantly"
3. "Auto-sends event-driven campaigns"
4. "Replies to interested leads automatically"
5. "A/B tests subject lines silently"
6. "Segments customers by tier"
7. "Schedules sends in customer time zones"
8. "Tracks campaign ROI per send"

AI VIP MANAGER [SALES & FOLLOW-UP]

Icon: crown · Live stat: "12 VIPs active"

1. "Tracks Silver / Gold / Platinum tiers"
2. "Remembers preferences per customer"
3. "Sends birthday & anniversary surprises"
4. "Reactivates Platinums automatically"
5. "Concierge-level recommendations"

6. "Auto-upgrades repeat renters"
7. "Tracks LTV per customer"
8. "Flags at-risk Platinum customers"

AI REVIEW MANAGER [REPUTATION & GROWTH]

Icon: star · Live stat: "184 reviews captured"

1. "Asks happy customers for Google reviews"
2. "Intercepts negative reviews privately"
3. "Replies to every review in your voice"
4. "Escalates 1-star reviews to you"
5. "Tracks review velocity weekly"
6. "Routes complaints to service recovery"
7. "Builds review templates per scenario"
8. "Monitors competitor review trends"

AI LISTING OPTIMIZER [REPUTATION & GROWTH]

Icon: search · Live stat: "+31% Google clicks"

1. "Updates Google Business Profile weekly"
2. "Posts fresh photos and offers"
3. "Optimizes for local AI search"
4. "Tracks keyword ranking shifts"
5. "Audits competitors monthly"
6. "Updates Yelp + TripAdvisor in sync"
7. "Generates local SEO content"
8. "Monitors map-pack ranking"

AI SOCIAL MANAGER [REPUTATION & GROWTH]

Icon: camera · Live stat: "42 Reels posted"

1. "Posts daily Reels and stories"
2. "Writes captions in your voice"
3. "Replies to comments automatically"
4. "Generates Reels from new fleet additions"
5. "Tracks engagement and adjusts cadence"
6. "Schedules optimal posting times"
7. "Repurposes content across platforms"
8. "Monitors hashtag performance"

AI CUSTOMER SUPPORT [REPUTATION & GROWTH]

Icon: headset · Live stat: "1.4K tickets resolved"

1. "Handles mid-rental issues at 3 AM"
2. "Walks customers through damage reports"
3. "Coordinates roadside and tow services"
4. "Verifies returns with photo evidence"
5. "Escalates emergencies to you instantly"
6. "Resolves billing disputes"

7. "Manages refund requests"
8. "Tracks satisfaction per ticket"

A.7 — Section 7 (Typewriter Questions): 18 Questions

Each question types out at ~30ms per character. After typing, 2.5s hold. Then fades up to "completed" position with checkmark. Cycle through all 18.

01. *"How many calls did you miss last weekend?"*
02. *"How many Instagram DMs are unread right now?"*
03. *"Which 3 customers almost booked, then ghosted?"*
04. *"What's your slowest response time this month?"*
05. *"How many of your past customers haven't been contacted in 90 days?"*
06. *"Which platforms have your worst reviews?"*
07. *"How many quotes are sitting open without follow-up?"*
08. *"What's your conversion rate on Spanish-speaking inquiries?"*
09. *"Which of your cars made you the most money this month?"*
10. *"What's happening on your accounts right now while you read this?"*
11. *"How many bookings did you lose to a faster competitor last month?"*
12. *"What's your true cost of one missed phone call?"*
13. *"How many comments on your last 5 Reels did you reply to?"*
14. *"When was the last time you asked a happy customer for a review?"*
15. *"How many F1-weekend inquiries did you handle last year?"*
16. *"Which channel converts at your highest rate — and how do you know?"*
17. *"How long did it take to send your last quote?"*
18. *"What's your repeat-customer rate compared to industry average?"*

Appendix B — Animation Reference

Master timing and easing reference. Every animation in the landing page in one place.

Standard Easing Curves

Default ease	cubic-bezier(0.16, 1, 0.3, 1) — Apple-style ease-out
Snappy	cubic-bezier(0.4, 0, 0.2, 1) — Material-style ease-in-out
Smooth	cubic-bezier(0.25, 0.1, 0.25, 1) — Standard ease-out cubic
Bouncy (subtle)	cubic-bezier(0.34, 1.56, 0.64, 1) — slight overshoot
Linear (count-ups)	linear — for tabular number ticks

Section-by-Section Animation Timings

Hero pill cycling	4s per message · 400ms cross-fade
Hero channel card cycling	~7s per channel · 600ms fade between
Channel card typewriter	~30ms per character
Real Results carousel	4s per card · 600ms slide-left
Real Results scan-line	3.5s sweep loop
Leak Calculator row swap	600ms fade-up + 700ms slide-up
Leak Calculator total tick	800ms ease-out quart
Damage meter fill	1.2s ease-out cubic
Meet the Team sub-line cycle	3.5s per line · 400ms blur-fade · staggered
Why Aiaura Wins number count	1.8s ease-out cubic from 0
Roadmap line draw-in	1.2s ease-out
Integrations inner orbit	40s per revolution clockwise
Integrations outer orbit	60s per revolution counter-clockwise
Typewriter question type	~30ms per character · 2.5s hold · 600ms fade
Typewriter cursor blink	1s on / 1s off
Track section device entry	800ms phone slide-up · 1000ms laptop slide-in (200ms delay)
FAQ accordion	300ms height + opacity ease-out

CTA button hover	200ms transform + shadow ease-out
Scroll-triggered card reveal	600ms fade-up + scale 0.95 → 1 with 200ms stagger

Reduced-Motion Behavior

When `prefers-reduced-motion: reduce` is detected, ALL of the following must be disabled:

- Hero pill cycling — show single static message
- Hero channel card cycling — show single static channel
- Channel card typewriter — show conversation in final state
- Real Results carousel — show first card with manual prev/next dots
- Leak calculator animation — show static frame
- Damage meter fill animation — show meters in final state
- Meet the Team sub-line cycle — show first capability line per card
- Number count-ups — show final number immediately
- Integrations orbital rotation — show static positions
- Typewriter — show questions in final state with manual prev/next
- Scroll-triggered reveals — render in final state immediately

Appendix C — Integration Logos List

Logos used in Section 6A (Integrations / Aiaura at the Center). Inner orbit shows 4 channels; outer orbit shows 4 operator tools. Tap "+ 16 more" to expand the full list below.

Inner Orbit — Channels (4 visible)

- Instagram — Use official Instagram gradient logo (purple-pink-orange)
- WhatsApp — Use official WhatsApp green phone icon
- Facebook Messenger — Use official Messenger gradient bolt logo
- SMS / Text — Use a custom mint chat-bubble icon (no native brand)

Outer Orbit — Operator Tools (4 visible)

- HQ Rental Software — Use HQ wordmark or "HQ" tile
- HubSpot — Use official HubSpot orange wordmark
- Stripe — Use official Stripe purple wordmark
- Twilio — Use official Twilio red wordmark

" + 16 More" Expanded Panel

Channels (additional):

- Email (Gmail · Outlook icons)
- Phone (Twilio Voice · RingCentral)
- TikTok DMs
- Twitter / X DMs
- Web Chat (custom widget)
- Apple Business Messages

Operator Tools (additional):

- RentSyst (rental management)
- Bluebird Auto Rental Systems
- Rent Centric
- Navotar
- Salesforce
- Pipedrive
- Zoho CRM
- Square
- Google Calendar
- Calendly
- Google Business Profile
- Yelp

- TripAdvisor
- QuickBooks
- Xero
- DocuSign

LEGAL NOTE

Use official brand assets where available (downloadable from each company's brand resource page). Where unavailable, render a clean text wordmark in the company's known color. Do not modify any logo (no recolor, no distort). Add small "Brand names and logos belong to their respective owners." disclaimer in the footer.

Appendix D — FAQ Schema (15 Q&A pairs)

Each Q&A pair appears in the Footer FAQ accordion AND must be encoded as JSON-LD FAQPage schema in the page <head> for AI search visibility (ChatGPT, Perplexity, Google AI Overviews, Claude search).

Q01. How long does it take to get Aiaura up and running?

Most US car rental operators are fully live within 14 days of sign-up. We do the technical heavy lifting — provisioning your phone numbers, verifying Meta business accounts for Instagram and WhatsApp, and connecting your existing tools. You bring the keys to your accounts and join one 30-minute kickoff call. After that, our team trains the AI on your fleet, pricing, and brand voice, and you go live in Test Mode first so you can approve every reply before it sends.

Q02. Do I have to replace my existing rental software like HQ Rental, RentSyst, or Bluebird?

No. Aiaura plugs into your existing rental management software, CRM, payment processor, and other tools without requiring you to migrate or replace anything. We work alongside HQ Rental, RentSyst, Bluebird, Rent Centric, HubSpot, Salesforce, Pipedrive, Stripe, Twilio, RingCentral, and 14 more tools. Your customer data stays where it is. Aiaura adds AI on top.

Q03. What if Aiaura makes a mistake at 3 AM and I miss it?

Aiaura starts in Test Mode where you approve every reply before it goes out — for the first 24 to 72 hours. Once you trust it, you switch to Live Mode. You can revert to Test Mode anytime. Aiaura also escalates urgent situations directly to your phone (accidents, complaints, VIP callers) with a critical-priority notification that overrides do-not-disturb. You stay in control.

Q04. Will Aiaura sound robotic or hurt my luxury brand?

No. Aiaura learns your exact brand voice during onboarding through guided training sessions. It uses real-sounding voice synthesis (ElevenLabs-grade audio) for phone calls and matches your tone — formal, casual, sophisticated — across text channels. We A/B test brand voice with your customers and adjust until it sounds indistinguishable from your top staff.

Q05. Can Aiaura handle Spanish-speaking customers in Miami, LA, and Houston?

Yes. Aiaura speaks 22+ languages including Spanish, Portuguese, French, Mandarin, Russian, and Arabic. It detects the customer's language automatically and replies in the same language. For Miami operators with large Hispanic customer bases, this typically captures an additional 10–15% of bookings that would otherwise go to bilingual competitors.

Q06. What does Aiaura cost?

Pricing depends on your fleet size and which AI products you need. We offer subscription bundles starting from \$599 per month for a single product (the Wedge tier) up to \$7,999+ per month for the full 12-product Concours tier. Most US car rental operators with 5–50

cars choose the \$1,999/month Boutique bundle. Run our free 5-minute audit to see your custom price.

Q07. What if I want to cancel?

We offer a 60-day money-back promise. If Aiaura doesn't pay for itself in your first 60 days through captured bookings, recovered leads, or vendor consolidation savings, we refund every cent. No fine print. No locked-in contracts. Cancel anytime month-to-month after the initial 60 days.

Q08. Are you a US company?

Aiaura serves US car rental operators with a US-based customer success team and US phone numbers. Our development team operates across global time zones, which is exactly why your AI gets monitored even at 3 AM your time. We are a Delaware C-Corp with US data hosting on AWS US-East and a US business address. Our founder leads strategy calls personally — and every demo is conducted by a member of our US-facing team.

Q09. Will Aiaura work with my existing phone number?

Yes. You can either keep your existing business phone number (we forward calls through Twilio while preserving your established phone reputation) or get a new local number from us with your area code (305 Miami, 213 LA, 702 Vegas, etc.). Most operators choose to forward their existing number — it preserves Yelp listings, Google Business Profile contact info, and business cards.

Q10. How is Aiaura different from Air.ai or Smith.ai?

Air.ai was shut down by the FTC in March 2026 for false advertising and inflated performance claims. Smith.ai is a generalist receptionist service that handles phones only — it doesn't know how to talk about insurance, mileage, damage policies, or luxury rental specifics. Aiaura is built only for US car rental operators with 12 specialized AI products that work together. We back every claim with a 60-day money-back guarantee.

Q11. Can I customize what Aiaura says?

Yes. During onboarding we train Aiaura on your exact brand voice, pricing rules, fleet inventory, and policies. You provide example responses you would have given, and Aiaura learns your style. You can edit any prompt or response template anytime. You can also pause Aiaura on specific channels (e.g., keep email manual, automate Instagram only).

Q12. What about chargebacks and fraud from international tourists?

Aiaura includes AI Booking Protector and AI Fraud Detection (in development) which flag high-risk bookings before deposit clears, verify driver licenses across US and international IDs, and build evidence packets for chargeback disputes automatically. Combined with proper deposit handling and damage documentation, most operators see 60–80% reduction in chargeback losses.

Q13. Can my team see what Aiaura is doing?

Yes. The Aiaura dashboard runs on phone, tablet, and laptop with real-time sync. You and your team can watch every conversation as it happens, take over any conversation manually, review activity logs, and see live revenue captured. Multi-user team accounts are included with role-based permissions (Owner, Admin, Sales, Support, Read-Only).

Q14. Does Aiaura integrate with my CRM?

Yes. Aiaura connects to HubSpot, Salesforce, Pipedrive, Zoho CRM, Folk, Attio, Monday CRM, plus the built-in CRMs of HQ Rental, RentSyst, and Bluebird. Customer records sync bi-directionally — when Aiaura captures a new lead, it appears in your CRM in real-time. When your team updates a contact in your CRM, Aiaura sees the change.

Q15. Is my customer data secure?

Yes. All customer data is hosted on AWS US-East with SOC 2-track infrastructure and encryption at rest and in transit. Multi-tenant isolation means each operator's data is fully separated from other Aiaura customers. We are CCPA compliant for California, GDPR compliant for any European customer data, and TCPA compliant for SMS and phone outreach. Conversations are stored as your business records — you own the data and can export anytime.

JSON-LD FAQPage Schema

The developer must encode the 15 Q&A pairs above as JSON-LD FAQPage schema in the page <head>. This makes the FAQ visible to AI search engines (ChatGPT, Perplexity, Google AI Overviews, Claude search) and Google rich results.

Validator: search.google.com/test/rich-results

Appendix E — Implementation Notes

Recommended File Structure

/app — Next.js App Router pages

/components — reusable React components per section

/components/animations — motion-specific components

/lib — utility functions, data files

/public — static assets, brand logos, integration logos

/styles — Tailwind config, custom animations, paper-grain texture

Key Components to Build

- CyclingPill — used in hero (35 messages) and many sections
- GlassmorphicCard — universal card primitive used 40+ times
- GradientNumber — tabular monospace number with mint→lime gradient + count-up
- SectionPill — small mint glassmorphic pill with pulsing dot
- CTAButton — primary mint→lime gradient button + secondary glass variant
- SketchedUnderline — hand-sketched mint underline component (SVG)
- MintHighlightSwipe — soft mint highlighter swipe behind titles (SVG)
- DotsIndicator — pagination dots with active state
- ChannelCard — hero cycling channel card with typewriter animation
- LeakRow — slim leak row with icon + label + amount
- DamageRow — focal damage row with damage meter
- ProductCard — Section 3 card with cycling sub-line
- MilestoneCard — Section 5 roadmap milestone card
- OrbitalDiagram — Section 6A integration orbits
- TypewriterQuestion — Section 7 typewriter question component
- FAQAccordion — Footer FAQ accordion with 15 items

Performance Budget

- First Contentful Paint: < 1.2s
- Largest Contentful Paint: < 2.0s
- Time to Interactive: < 3.0s
- Cumulative Layout Shift: < 0.1
- Bundle size (initial JS): < 200KB gzipped
- Image total size: < 1MB on initial load
- Font total size: < 200KB (variable fonts preferred)

SEO + AI Search Visibility

- Meta title: "Aiaura Fleets — AI staff for US car rental operators"
- Meta description: "Aiaura is AI staff for US car rental shops with 5–50 cars. Built to never miss a booking. Replaces 8 vendors with one platform. Live in 14 days."
- Open Graph image: hero composition with petal logo + headline + cycling channel preview
- Schema.org structured data: Organization + FAQPage + Product
- Sitemap.xml + robots.txt
- Canonical URL
- Hreflang for en-US (and en-CA, es-US in v2)
